After a war breaks out, what factors influence the warring parties' decisions about whether to talk to their enemy, and when may their position on wartime diplomacy change? How do we get from only fighting to also talking? In *The Costs of Conversation*, Oriana Skylar Mastro argues that states are primarily concerned with the strategic costs of conversation, and these costs need to be low before combatants are willing to engage in direct talks with their enemy. Specifically, Mastro writes, leaders look to two factors when determining the probable strategic costs of demonstrating a willingness to talk: the likelihood the enemy will interpret openness to diplomacy as a sign of weakness, and how the enemy may change its strategy in response to such an interpretation. Only if a state thinks it has demonstrated adequate strength and resiliency to avoid the inference of weakness, and believes that its enemy has limited capacity to escalate or intensify the war, will it be open to talking with the enemy. Through four primary case studies—North Vietnamese diplomatic decisions during the Vietnam War, those of China in the Korean War and Sino-Indian War, and Indian diplomatic decision making in the latter conflict—*The Costs of Conversation* demonstrates that the costly conversations thesis best explains the timing and nature of countries' approach to wartime talks, and therefore when peace talks begin. As a result, Mastro's findings have significant theoretical and practical implications for war duration and termination, as well as for military

strategy, diplomacy, and mediation.

From bank bailouts to austerity, Europe's and Ireland's response to the economic crisis has been engineered specifically to shift the burden of paying for the crisis onto ordinary citizens while investors, financiers, bankers and the privileged are protected. The authors expose the class-based nature of Ireland's crisis resolution.

Globalization and technological advances have had a dramatic impact on the relationship between media and politics. How can we understand the connection between the two in the present day? Alexa Robertson argues that we cannot understand the power of the one without taking the other into account. This exciting and accessible book provides fresh insight into our contemporary media landscape, adopting a truly comparative global approach. In *Media and Politics in a Globalizing World*, Robertson encourages the reader to explore the relationship from different perspectives – those of the politician, the journalist, the activist and the ordinary citizen – and how the relationship between media and politics varies across cultures. Illustrated with contemporary examples throughout, the book weighs up arguments for seeing new developments in terms of change or continuity, as empowering or debilitating, and as promoting or undermining democracy. Suitable for undergraduates and postgraduates studying politics, media and sociology, it also will be of interest to the general reader wishing to understand the complex role of the media in political life the world over. Machiavelli Had it Easy is an engaging text for the emerging discipline of governance. Gaps arise when directors and managers come together from diverse vocational and cultural languages and interests. Compressed information streams in the digital age, yet few reconcile silos of business, legal expertise and regulatory public-interests for informed decisions. This text presents research and a market-tested decision-framework for comparative law, market practice, and human nature in the vital strategic-oversight role of governance. Informed by cognitive science, business practice and legal duties, one conclusion is that bias and self-interests are instinctive but reconciling best-interests is not. Too often lessons learned from centuries of law are overlooked. The chapters are a dozen inquiries into recurring problems in the boardroom. Part one is an entry-level technical reference of law and governance principles. Unique appendices of keywords and case notes will aid those new to markets governed by the western rule-of-law and those tripping on gaps in comparative jargon. Part two is a series of practical hot-topics in the context of law and governance; part three looks to next steps in accountability and liability. The text will help accountants, engineers, lawyers, and business operations and market-policy experts from around the world work together, and; professors, professionals and students anticipate change. After drilling through accountability and liability for hybrid organizations, typical crises are revealed to be from a lack of aligning interests and related information churn. Conclusions of the how and why of governance systems link the human condition and the rule-of-law in the digital age.

This book analyses the Syria crisis and the role of chemical weapons in relation to US foreign policy. The Syrian government's use of such weapons and their subsequent elimination has dominated the US response to the conflict, where these are viewed as particularly horrific arms - a repulsion known as the chemical taboo. On the surface, this would seem to be an appropriate reaction: these are nasty weapons and eradicating them would ostensibly comprise a 'good' move. But this book reveals two new aspects of the taboo that challenge this prevailing view. First, actors use the taboo strategically to advance their own self-interested policy objectives. Second, that applying the taboo to Syria has actually exacerbated the crisis. As such, this book not only provides a timely analysis of Syria, but also a major and original rethink of the chemical taboo, as well as international norms more widely.

In January 1976, Raymond Barre, the first President of The Geneva Association, and Orio Giarini, its first Secretary General, founded The Geneva Papers on Risk and Insurance with the main goal of supporting and encouraging research in the economics of risk and insurance. At that time, research in the field of insurance was still embryonic and insurance was regarded as peripheral social activity. When sustained economic growth gained traction, the function of insurance gradually emerged as a key contributor to economic development. By integrating uncertainty into economic theory and benefiting from the progress of both financial economics and decision theory, research developed further in the field of insurance economics and risk management, and is now prolific. The Geneva Papers on Risk and Insurance undeniably contributed to this evolution and its impact on research in insurance has largely exceeded what its two founding members could have expected. This volume is a special collection of papers celebrating 40 Years of The Geneva Papers on Risk and Insurance. The collection looks back at the storied history of The Geneva Papers on Risk and Insurance and features papers from some of the es-

teemed authors who have contributed to the journal in its lifetime. This collection of papers highlights just a few of the many themes addressed in the papers published by the journal since it was created. Nevertheless, the selection exemplifies the richness and variety of topics the field of insurance covers.

This work introduces and further develops the feminist strategy of 'norm transfer': the proposal that feminist informed standards created at the level of international criminal law make their way into domestic contexts. Situating this strategy within the complementarity regime of the International Criminal Court (ICC), it is argued that there is an opportunity for dialogue and debate around the contested aspects of international norms as opposed to uncritical acceptance. The book uses the crime of rape as a case study and offers a new perspective on one of the most contentious debates within international and domestic criminal legal feminism: the relationship between consent and coercion in the definition of rape. In analysing the ICC definition of rape, it is argued that the omission of consent as an explicit element is flawed. Arguing that the definition is in need of revision to explicitly include a context-sensitive notion of consent, the book goes further, setting out draft legislative amendments to the ICC 'Elements of Crimes' definition of rape and its Rules of Procedure and Evidence. Turning its attention to the domestic landscape, the book drafts amendments to the United Kingdom (UK) Sexual Offences Act 2003 and to the Youth Justice and Criminal Evidence Act 1999: thereby showing how the revised version of the ICC definition can be applied in context of the UK.

Developing countries lose billions each year through bribery, misappropriation of funds, and other corrupt practices. Much of the proceeds of this corruption find 'safe haven' in the world's financial centers. These criminal flows are a drain on social services and economic development programs, contributing to the impoverishment of the world's poorest countries. Many developing countries have already sought to recover stolen assets. A number of successful high-profile cases with creative international cooperation has demonstrated that asset recovery is possible. However, it is highly complex, involving coordination and collaboration with domestic agencies and ministries in multiple jurisdictions, as well as the capacity to trace and secure assets and pursue various legal options—whether criminal confiscation, non-conviction based confiscation, civil actions, or other alternatives. This process can

be overwhelming for even the most experienced practitioners. It is exceptionally difficult for those working in the context of failed states, widespread corruption, or limited resources. With this in mind, the Stolen Asset Recovery (StAR) Initiative has developed and updated this Asset Recovery Handbook: A Guide for Practitioners to assist those grappling with the strategic, organizational, investigative, and legal challenges of recovering stolen assets. A practitioner-led project, the Handbook provides common approaches to recovering stolen assets located in foreign jurisdictions, identifies the challenges that practitioners are likely to encounter, and introduces good practices. It includes examples of tools that can be used by practitioners, such as sample intelligence reports, applications for court orders, and mutual legal assistance requests. StAR—the Stolen Asset Recovery Initiative—is a partnership between the World Bank Group and the United Nations Office on Drugs and Crime that supports international efforts to end safe havens for corrupt funds. StAR works with developing countries and financial centers to prevent the laundering of the proceeds of corruption and to facilitate more systematic and timely return of stolen assets.

In an educational system founded on rigid standards and categories, students who demonstrate a very specific manifestation of intelligence flourish, while those who deviate tend to fall between the cracks. Too often, talents and interests that do not align with classroom conventions are left unrecognized and unexplored in children with extraordinary potential but little opportunity. For twice-exceptional (2e) children, who have extraordinary strengths coupled with learning difficulties, the problem is compounded by the paradoxical nature of their intellect and an unbending system, ill-equipped to cater to their unique learning needs. Twice Exceptional: Supporting and Educating Bright and Creative Students with Learning Difficulties provides cutting-edge, evidence-based approaches to creating an environment where twice-exceptional

students can thrive. Viewing the 2e student as neither exclusively disabled nor exclusively gifted, but, rather, as a dynamic interaction of both, leading experts offer holistic insight into identification, social-emotional development, advocacy, and support for 2e students. With chapters focusing on special populations (including autism, dyslexia, and ADHD) as well as the intersection of race and 2e, this book highlights practical recommendations for school and social contexts. In expounding the unique challenges faced by the 2e population, Twice Exceptional makes a case for greater flexibility in our approach to education and a wider notion of what it means to be academically successful.

An effective and cost efficient protection of electronic system against ESD stress pulses specified by IEC 61000-4-2 is paramount for any system design. This pioneering book presents the collective knowledge of system designers and system testing experts and state-of-the-art techniques for achieving efficient system-level ESD protection, with minimum impact on the system performance. All categories of system failures ranging from 'hard' to 'soft' types are considered to review simulation and tool applications that can be used. The principal focus of System Level ESD Co-Design is defining and establishing the importance of co-design efforts from both IC supplier and system builder perspectives. ESD designers often face challenges in meeting customers' system-level ESD requirements and, therefore, a clear understanding of the techniques presented here will facilitate effective simulation approaches leading to better solutions without compromising system performance. With contributions from Robert Ashton, Jeffrey Dunninghoo, Micheal Hopkins, Pratik Maheshwari, David Pomerence, Wolfgang Reinprecht, and Matti Usumaki, readers

benefit from hands-on experience and in-depth knowledge in topics ranging from ESD design and the physics of system ESD phenomena to tools and techniques to address soft failures and strategies to design ESD-robust systems that include mobile and automotive applications. The first dedicated resource to system-level ESD co-design, this is an essential reference for industry ESD designers, system builders, IC suppliers and customers and also Original Equipment Manufacturers (OEMs). Key features: Clarifies the concept of system level ESD protection. Introduces a co-design approach for ESD robust systems. Details soft and hard ESD fail mechanisms. Detailed protection strategies for both mobile and automotive applications. Explains simulation tools and methodology for system level ESD co-design and overviews available test methods and standards. Highlights economic benefits of system ESD co-design.

This book focuses on the prevention of child abuse and neglect deaths in the U.S. In 2013 1,520 children died from maltreatment.

This book defines child maltreatment fatalities (CMFs) and discusses the prevalence of deaths in the U.S. over the last several decades. It addresses the known risk factors for maltreatment deaths including child, parent, the parent-child relationship, and household risk factors. The main focus of the book addresses the responses and interventions that have been put in place in order to prevent CMFs: the child welfare profession, child death review teams, safe haven laws, criminal justice responses, public education, and new, federal efforts in the U.S. to reduce CMFs in the U.S. The book finishes by making recommendations for researchers, practitioners, and decision-makers about how to prevent fatal maltreatment among children in the U.S.
