An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously re-

ports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

By adopting a new approach to helping students understand how management accounting contributes to decisions in a variety of organizational contexts, this textbook sets out clear explanations of practical management accounting techniques - in the context of the application of these techniques to decisions. Uniquely, the book examines the analytical and critical issues that often influence decision makers operating within private and public sector organizations. It is supported by case studies of varying complexity that will allow students to work at their own level and also includes summaries.

Give your students a solid foundation in core accounting concepts while helping learners develop a true appreciation for why accounting is important to business and a prosperous society. Warren/Reeve/Duchac's FINANCIAL AND MANAGERIAL ACCOUNTING, 14E clearly demonstrates how accounting is much more than simply data and black and white rules. Instead, students see how accounting provides key information used to make critical business decisions. A new chapter schema provides context for how each chapter's content fits into the big picture. The book focuses on why accounting is important and consistently reinforces connections to the big picture by connecting journal entries to the accounting equation. Fresh organization progresses from the simplest to the more complex topics with reorganized and fully integrated coverage of the new Revenue Recognition stan-

dard, reorganized coverage of adjustments, and reorganized managerial accounting chapters Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Providing students with the skills to prepare and analyze company-only and consolidated financial statements, this book also looks at the theory behind asset valuation and income determination, and encourages students to develop an awareness of the limitations of conventional financial statements. teaching and learning aids, such as discussion questions, reference to source material, further reading suggestions and worked examples. It is designed for undergraduate 2nd year financial accounting courses, 2nd/3rd year undergraduate business courses, and 1st year MBA/DMS courses.

This is the second book of selected papers on environmental management accounting (EMA) which has been developed for Kluwer by the Environmental Management Accounting Network - Europe (EMAN-Eu), drawn primarily from papers presented at EMAN-Eu, to bring together several examples of leading thinking and practice internationally in this rapidly developing area. The authors include academics, practitioners from industry, and government policy-makers, and the subjects covered range from individual company experiences to the role of government in promoting EMA in industry. The papers included in the book provide several examples of how EMA can be applied in practice both in large corporations and in small and medium-sized enterprises, and of reports on the extent of the implementation of EMA and the conditions which encourage this. The book is intended for all those interested in EMA as either researchers or practitioners. It will also be of interest both to those interested in how well-established management accounting methods can be adapted and extended in order to meet new demands on companies, and also to environmental managers interested in learning how accounting techniques can be of value in achieving environmental management objectives.
