CIRIA Report C665 Within the construction industry, the following

hazardous ground gases are the most frequently encountered which require control and management: • methane • carbon dioxide • radon • hydrocarbon (including organic vapours). Methane, carbon dioxide, radon and organic vapours occur naturally in the environment.

A guide to ground treatment J M Mitchell F M Jardine This report was largely completed before 1993 but has been reviewed and updated in the light of comments made in 1999 and 2000 by the steering group for CIRIA Research Project 604, fiTreated ground Œ engineering properties and durab ilityfl (iss ued as CIRIA publication C572, 2002).

BS8007 was supported by CIRIA 91 which provided background to the design method and data for use in the design process. This has been updated and replaced by CIRIA C660 which brings the design into line with the Euro-codes and provides current information required to support the design process.

CIRIA | BombRisk

BombRisk's accuracy is based upon its unique combination of expert data and professional interpretation. Expert data includes the results of interrogating geospatial databases and the analysis of historical evidence of UXO risk. Professional interpretation is provided by SafeLane's subject matter experts.

The BIG Biodiversity Challenge to 'do one thing' invites the construction industry to add at least one new biodiversity enhancement to construction sites, developments or existing buildings.. A biodiversity enhancement is an action that improves biodiversity and ecological habitat in the local environment. Enhancements should increase opportunities for biodiversity and go beyond nor-
