The 1889 Meiji constitution: how it actually worked, the establishment of the Diet and the shifting roles and interests of the par-

ties. A Japanese classic translated by one our leading authorities. The area of similarity searching is a very hot topic for both research and commercial applications. Current data processing applications use data with considerably less structure and much less precise queries than traditional database systems. Examples are multimedia data like images or videos that offer query by example search, product catalogs that provide users with preference based search, scientific data records from observations or experimental analyses such as biochemical and medical data, or XML documents that come from heterogeneous data sources on the Web or in intranets and thus does not exhibit a global schema. Such data can neither be ordered in a canonical manner nor meaningfully searched by precise database queries that would return exact matches. This novel situation is what has given rise to similarity searching, also referred to as content based or similarity retrieval. The most general approach to similarity search, still allowing construction of index structures, is modeled in metric space. In this book. Prof. Zezula and his co authors provide the first monograph on this topic, describing its theoretical background as well as the practical search tools of this innovative technology.

Syriac is the Aramaic dialect of Edessa in Mesopotamia. Today it is the classical tongue of the Nestorians and Chaldeans of Iran and Iraq and the liturgical language of the Jacobites of Eastern Anatolia and the Maronites of Greater Syria. Syriac is also the language of the Church of St. Thomas on the Malabar Coast of India. Syriac belongs to the Levantine group of the central branch of the West Semitic languages. Syriac literature flourished from the third century on and boasts of writers like Ephraem Syrus, Aphraates, Jacob of Sarug, John of Ephesus, Jacob of Edessa, and Barhebraeus. After the Arab conquests, Syriac became the language of a tolerated but disenfranchised and diminishing community and began a long, slow decline both as a spoken tongue and as a lit-

erary medium in favour of Arabic. Syriac played an important role as the intermediary through which Greek learning passed to the Islamic world. Syriac translations also preserve much Middle Iranian wisdom literature that has been lost in the original. Here, the language is presented both in the Syriac script and in transcription, which is given so that the pronunciation of individual words and the structure of the language may be represented as clearly as possible. The majority of the sentences in the exercises -- and all of the readings in later lessons -- are taken directly from the P'it-ta, the Syriac translation of the Bible. Most students learn Syriac as an adjunct to biblical or theological studies and will be interested primarily in this text. Biblical passages also have the advantage of being familiar, to some degree or other, to most English-speaking students. For many of those whose interest in Syriac stems from Biblical studies or from the history of Eastern Christianity, Syriac may be their first Semitic language. Every effort has been made in the presentation of the grammar to keep the Semitic structure of the language in the forefront and as clear as possible for those who have no previous experience with languages of that family. Syriac is structurally perhaps the simplest of all the Semitic languages. A chart of correspondences among Arabic, Hebrew, and Syriac is given.

This collection, which won the 2015 Costa Poetry Award, is an exhibition of the Dundee-born poet's stunningly accomplished adoption of the sonnet's ancient structure This collection from Don Paterson, his first since the Forward Prize-winning *Rain* in 2009, is a series of forty luminous sonnets. Some take a traditional form, while others experiment with the reader's conception of the sonnet, but they all share the lyrical intelligence and musical gift that has made Paterson one of our most celebrated poets. Addressed to friends and enemies, the living and the dead, children, musicians, poets, and dogs, these poems are as ambitious in their scope and tonal range as in the breadth of their concerns. Here, voices call home from the blackout and the airlock, the storm cave and the s♦ance, the coal shed, the war, the highway, the forest, and the sea. These are voices frustrated by distance and darkness, which ring with the "sound that fades up from the hiss, / like a glass some random downdraught had set ringing, / now full of its only note, its lonely call." In 40 Sonnets, Paterson returns to some of his central themes—contradiction and strangeness, tension and transformation, the dream world, and the divided self—in some of the most powerful and formally assured poems of his career.
