Gender Differences in Body Image Are Increasing - Alan ...

An Empirical Analysis of the Offer Self-Image ...

This article describes a questionnaire measure of self-image designed for young adolescents. It represents a down-

ward extension of the Offer Self-Image Questionnaire and utilizes nine scales from that instrument: Emotional Tone, Impulse Control, Body Image, Peer Relationships, Family Relationships, Mastery and Coping, Vocational/Educational Goals, Psychopathology, and Superior Adjustment.

The Offer Self-Image Questionnaire: a factorial validation ...

The Self-Image Questionnaire for Young Adolescents (SIQYA), an adaptation of the Offer Self-Image Questionnaire (OSIQ), designed to measure aspects of self-image among young adolescents, was administered to two groups of sixth graders. The development of the SIQYA is described and reliability and validity results are presented. (EGS)

The construct validity and the ability of the Offer Self-Image Questionnaire for Adolescents (OSIQ, Offer, Ostrov & Howard, 1982) to differentiate between clinical and normal groups were examined. Subjects were 197 students recruited from schools and 30 clinical subjects recruited from an outpatient adolescent counselling service in St. John's, Newfoundland.

Abstract. The reliability and validity of the Offer Self-Image Questionnaire (OSIQ) for adolescents were investigated using data from an Australian sample of male and female school students, with an average age of 14.9 years (n=216). Reliability coefficients were high for all subscales except the Morals subscale.

About the Edition. Measures adjustment and self-image in adolescents (13-19 years of age). The manual presents OSIQ-R profiles for various groups, including adolescents with single episode and recurring depression, those at risk for suicide, delinquent youths, and teenagers

with eating disorders.

The Offer Self-Image Questionnaire for Adolescents was constructed in 1961 through 1962. Its purpose has been to tap significant areas in the adjustment and the psychology of the teen-ager. During the past ten years, the questionnaire has been utilized by a number of investigators.

The Offer Self-Image Questionnaire (OSIQ) is widely used in psychiatry for measuring adolescents' self-image. As the OSIQ is a self-reported questionnaire, it can be easily used for research purpose in a large population such as teenagers attending schools.
