A Humancentric Approach to a Technological Innovation THIS IS NOT SIMPLY A BOOK ABOUT TECHNOLOGY. IT IS A BOOK ABOUT THE INCREASING ROLE HUMANITY MUST PLAY DURING THIS TECH- NOLOGICAL REVOLUTION IN ORDER TO THRIVE, NOT JUST SUR- VIVE. In The transHuman Code, authors Carlos Moreira and David Fergusson ask, "Are we building a better future for humanity with the help of magnificent technology or could we instead be build- ing a future with better technology at the expense of humanity?" In proclaiming the obvious, that the human is and will always be the greatest and most advanced technology the world has ever known, the authors ask, "Doesn't it then make the most sense to place the understanding, improvement, and utilization of humani- ty as today's highest priority?" The transHuman Code is a book of conversations about how we employ the power of technology to script the best future possible. By introducing you to some of the world's most important innovators and dynamic developments oc- curring today, giving you a clearer understanding of their implica- tions and then sparking the conversations that need to happen as a result, the hope is that together we will develop a transHuman code that will allow us to remain both the apex and axis of all tech- nological progress from here forward. How we do this today is new territory. Dynamic innovative opportunities are here, or very near, for the taking. Which ones should we pursue and why? The transHuman Code introduces, through an address of the core ele- ments of our life ecosystem, the discussions we must have. To- gether, both readers and contributors will form collective, proac- tive answers in this interactive process. You are invited to join Mor- eira and Fergusson, through this groundbreaking book, to begin this important work together.

For all being interested in astronautics, this translation of Her- mann Oberth's classic work is a truly historic event. Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws.

"The title of this volume is, of course, taken from 2 Kgs 6:1, where the prophetic group about Elisha point out that their accomoda- tion is too cramped. It seemed an apt comment on the capacity of any proposed volume to house and adequate representation of the work that has recently been done on Israelite prophecy. To this I now have to add the all-too-ironic confession that the so-- called pre-classical prophets (including Elisha and his colleagues) could not be accomodated in the present volume. Let no one com- plain about being misled by the subtitle when the title is so hon- est ... there are thirty-six items of varying legnth, and they divide almost equally between journal articles and excerpts from vol- umes (some of thes of composite authorship). Naturally, they rep- resent one individual's selection from within his personal reading, and this itself accounts for only a fraction of the vast scholarly out- put on the prophets, whether since 1875 or since 1975 ... It will be apparent at several places in the volume that I take with great

seriousness the study of Near Eastern (non-Israelite) prophecy as background to the Israelite phenomenon, so that the first short section (The Near Eastern Background") was unavoidable."--Edi- tor's preface.

Digital technologies have fundamentally altered the nature and function of media in our society, reinventing age-old practices of public communication and at times circumventing traditional me- dia and challenging its privileged role as gatekeepers of news and entertainment. Some critics believe these technologies keep the public involved in an informed discourse on matters of public im- portance, but it isn't clear this is happening on a large scale. Pro- paganda disguised as news is flourishing, and though interaction with the digital domain teaches children valuable skills, it can also expose them to grave risks. John V. Pavlik critically examines our current digital innovations?blogs, podcasting, peer-to-peer file sharing, on-demand entertainment, and the digitization of televi- sion, radio, and satellites?and their positive and negative implica- tions. He focuses on present developments, but he also peers into the future, foreseeing a media landscape dominated by a highly fragmented, though active audience, intense media competition, and scarce advertising dollars. By embracing new technologies, however, Pavlik shows how professional journalism and media can hold on to their role as a vital information lifeline and continue to operate as the tool of a successful democracy.

Much has been said and written about Japan's manufacturing prowess. Most ofthe comment comes from people who are merely visitors to the country and can be best classified as 'observers looking in from the outside'. Other views come from the Japanese themselves in which the double barrier of culture and language filters out much information that would be of real value to Western industrialists. Neither of these limitations apply to John Hartley, who has been resident in Japan for the past five years. He understands the culture, can speak the language and has extensive contacts at the highest level. Therefore, he is in a unique position to report on the Japanese scene and its activities in advanced manufacturing technology. This he has been doing on a regular basis to IFS magazines: The Industrial Robot, Assembly Automation, Sensor Review and The FMS Magazine. Most of the material in this book is from John Hartley's 'pen' and represents his most significant contributions on flexible automation in Japan to these journals over the last three years. It is augmented with a few other articles written by leading authorities on new technology in Japanese manufacturing industry.
